

RAOB Newsletter - January 2011

RAOB Friends & Users:

You have received this message because you are a RAOB owner or friend. If you received this message in error or no longer desire to receive these messages, just respond to this message by indicating REMOVE in the Subject or Body of this message.

This is a reminder that RAOB has a "Winter Weather" display mode, which can be activated from the DISPLAYS Menu Bar. Note that the Winter Weather display mode is only available with the optional Analytic program module. Use this link for an overview of the Analytic module and an example of the Winter Weather diagram:

www.raob.com/mod_analytic.php

For RAOB 6.1 users only. The latest version contains serial numbers beginning with 6162, so if the first 4 digits of your RAOB serial number are less, you should download the latest program update using RAOB's Help menu (RAOB Program Updates) for the download link. This update contains improvements the Radiometrics (RDX), InterMet (iMet), Binary (GRIB), and CSV decoders. Improvements were also made to the sounding Filter process and the WMO and CSV data encoders.

Important ... If you have program comments or questions, please send them using a separate message to wxx@raob.com
