

RAOB Newsletter - April 2011

RAOB Friends & Users:

You have received this message because you are a RAOB owner or friend. If you received this message in error or no longer desire to receive these messages, just respond to this message by indicating REMOVE in the Subject or Body of this message.

Just in time for the spring severe weather season. The developing RAOB 6.2 program now has a Sounding Scanner display, which permits fast analysis of up to 2,000 soundings to quickly determine which meet severe weather criteria. Scan soundings from either a single-station time-series or a synoptic group from any geographic region. The Scanner permits visual interrogation up to 30 indices (such as CAPE and Hail) from a total selection of 48 user-configurable parameters. See the link below for an example Scanner display screen...
