The new RAOB 6.2 program is finally here. It is by far the biggest program upgrade ever. With over 200 program improvements, here is the list of major enhancements ... www.raob.com/enhancements62.php

Here are the top 15 enhancements of RAOB 6.2:

- > Ten new data decoders.
- > Five new forecast indices.
- > Seventeen new Meteogram options for Cross-Sections.
- > New Scanner display modes for Soundings and Soundingrams.
- > The new Sodar/Lidar Data Decoders module.
- > Vertical wind components (W) are now decoded and plotted.
- > New UVW wind component display screens - for soundings & hodographs.
- > The new Fire-Weather & Air-Quality display screen.
- > New widescreen display options allow multi-diagram views.
- > New Thermogram and Hail/No-Hail nomogram displays.
- > New rubber-band-zoom capability on vertical cross-sections.
- > New and improved Batch & Timer automation options.
- > Expanded and improved BUFR, GRIB, and netCDF decoders.
- > Numerous improvements for many diagram configuration options.
- > The new RAOB Lite program - an introductory starter program.

Those who made a RAOB 6.1 purchase have already been notified of their free upgrade to this RAOB 6.2 program. Those who last made a RAOB 6.0 purchase were also notified of an offer to upgrade to the RAOB 6.2 program at a 50% discount cost. If you believe you fit either of the above user groups and were not notified, please contact wxx@raob.com and provide your RAOB program serial number, which is located under the Help menu, 'About RAOB...'.
